

23rd IVI International Vaccinology Course

VACCINE TO VACCINATION: FROM SCIENCE TO SOCIETY

2-6 SEPTEMBER 2024

The 23rd IVI International Vaccinology Course will explore the basics of vaccinology and the process involved in creating vaccines—how they are developed, tested, regulated, and approved—while emphasizing their ultimate utility: vaccination.

What challenges must we overcome to ensure vaccines are used and do not expire on shelves? How do we shape markets that demand vaccines? How do we provide a sustainable supply for routine immunization and emergencies? How do we instill and maintain confidence in vaccines and their benefits to society?

Join us for a five-day intensive course on the full value of vaccines, from the science to their impact on our everyday lives.

This year's course will be held at three sites simultaneously connected through live broadcast, combining lectures, Q&A, group case studies, and other interactive activities. Our worldclass faculty of lecturers from the public and private sectors of global health are from Africa CDC, CEPI, Ghana FDA, Hilleman, IVI, KAIST, Karolinska Institutet, London School of Hygiene & Tropical Medicine, Moderna, National University of Singapore, Nagasaki University, One Health Trust, UNICEF, University of Rwanda, WHO, and more.

Seoul, Republic of Korea

Number of participants: 100

Stockholm, Sweden

Organized in partnership with
Karolinska Institutet

Number of participants: 30

Kigali, Rwanda

Organized in partnership with
University of Rwanda

Number of participants: 100

2-6 September 2024

Live lectures, case studies,
site visits

Networking opportunities

Certificate of completion
